

METALIZED

COLD CHAIN SOLUTIONS

Both eye catching and practical, these products double as both a Cold Chain solution for short cycle shipments and to create high impact consumer awareness. The metalized material acts as a barrier for Cold Chain shipments to help maintain consistent temperatures and avoid excursions. The silver finish can also identify your shipment or company with a more unique look to standard poly mailers as well as standard bubble packaging. These products are used to help keep temperatures consistent and help to control the movement of moisture and odor. They are used in OEM applications as well.

FEATURES & BENEFITS

- Reduces warehouse space required for storage versus Polystyrene containers by up to 75%
- Reduces packaging labour versus other packaging materials
- Substantial freight savings versus other packaging materials
- Reusable material
- Provides cushioning for fragile items
- Custom sizes available
